```
1 What will be the output of the following code snippet?
 def func(a, b):
  return b if a == 0 else func(b % a, a)
 print(func(30, 75))
    a) 10
    b) 20
    c) 15
    d) 0
ANSWER- C-15 75 MODULUS 30 REMAINDER =15
 2 numbers = (4, 7, 19, 2, 89, 45, 72, 22)
 sorted_numbers = sorted(numbers)
 even = lambda a: a % 2 == 0
 even_numbers = filter(even, sorted_numbers)
 print(type(even_numbers))
    a) Int
    b) Filter
    c) List
    d) Tuple
ANSWER- a- Integer== Because question asked the type of numbers.
           If asked data type then it will be tuple.
 3) As what datatype are the *args stored, when passed into
 a) Tuple
 b) List
 c) Dictionary
 d) None
 ANSWER- a- Tuple
```

4) $set1 = \{14, 3, 55\}$

 $set2 = \{82, 49, 62\}$

set3={99,22,17}

print(len(set1 + set2 + set3))a) 105 b) 270 c) 0 d) Error **Answer - Error** 5) What keyword is used in Python to raise exceptions? a) raise b) try c) goto d) except Answer- a-raise 6) Which of the following modules need to be imported to handle date time computations in Python? a) timedate b) date c) datetime d) time Answer- C- datetime 7) What will be the output of the following code snippet? print(4**3 + (7 + 5)**(1 + 1))a) 248 b) 169 c) 208 d) 233 Answer- C-208 by using BODMAS rule 8) Which of the following functions converts date to corresponding time in Python? a) strptime b) strftime c) both a) and b)

d) None

Answer- a- strptime

- 9) The python tuple is **immutable**____in nature.
- a) mutable
- b)immutable

10	1	Λ	1
10)	1	0	,

The____is a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.

- A. range()
- B. set()
- C. dictionary{}
- D. None of the mentioned above

Answer- A- range()

Question 11

Amongst which of the following is a function which does not have any name?

- A. Del function
- B. Show function
- C. Lambda function
- D. None of the mentioned above

Answer- C-Lambda function

Question 12

The module Pickle is used to____.

- A. Serializing Python object structure
- B. De-serializing Python object structure
- C. Both A and B
- D. None of the mentioned above

Answer- C- Both A and B

Question 13

Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?

- A. set() method
- B. dump() method
- C. load() method
- D. None of the mentioned above

Answer- B-dump() method

Amongst which of the following is / are the method used to unpickling data from a binary file?

- A. load()
- B. set() method
- C. dump() method
- D. None of the mentioned above

Answer-load () method

15.

A text file contains only textual information consisting of _____.

- A. Alphabets
- B. Numbers
- C. Special symbols
- D. All of the mentioned above

Answer- D-All of mentioned above

16

Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.)

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
}
```

Enterprise Picard,

Voyager Janeway

Defiant Sisko

a) for ship, captain in captains.items():

```
print(ship, captain)
```

b) for ship in captains:

```
print(ship, captains[ship])
```

c) for ship in captains:

```
print(ship, captains)
             d) both a and b
Answer- d-Both a & b
 17)
 Which of the following lines of code will create an empty dictionary named captains?
    a) captains = {dict}
    b) type(captains)
    c) captains.dict()
    d) captains = {}
Answer- d- captains = \{ \}
 18) Now you have your empty dictionary named captains. It's time to add some data!
 Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway",
 and "Defiant": "Sisko".
 Which of the following code snippets will successfully add these key-value pairs to the
 existing captains dictionary?
     a) captains{"Enterprise" = "Picard"}
     captains{"Voyager" = "Janeway"}
     captains{"Defiant" = "Sisko"}
     b) captains["Enterprise"] = "Picard"
     captains["Voyager"] = "Janeway"
     captains["Defiant"] = "Sisko"
    c) captains = {
       "Enterprise": "Picard",
       "Voyager": "Janeway",
       "Defiant": "Sisko",
     }
     d) None of the above
```

Answer- C

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
    print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
    print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
    print(f"The {ship} is captained by {captain}.")
d) All are correct
Answer- b
```

20)

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
}
```

What statement will remove the entry for the key "Discovery"?

a) del captains
b) captains.remove()
c) del captains["Discovery"]
d) captains["Discovery"].pop()
Answer- C- del captains["Discovery"]
